

Check if Applicable

- Calves weaned for 40 days at least.
- An injection of selenium has been administered to calves in the last two weeks.
- A protocol for managing unintentional gestations of females is available on the farm.
- I hereby certify that the farm is certified VBP+.
- I want the farm's name to be displayed when the animals are put up for sale.
- I hereby certify that the calves targeted by this statement have not received growth hormones¹ or any other growth factor (ionophores²) or antibiotics as a preventive measure since birth.
- ¹ Growth hormones: Ralgro, Component, Compudose, Revalor, Synovex, MGA. ² Ionophores: Rumensin, Bovatec, Posistac.
- I have a cattle squeeze chute.

Should you have any questions, ask your veterinarian or your animal feed advisor.

Feeder Calves Vaccination

I declare that _____ calves delivered to the auction _____ on this _____
Number Name of Auction Date (Year-Month-Day)
have been vaccinated according to the vaccination protocol with the following vaccine(s):

Name of Vaccine(s): _____
 Date of Vaccination: _____
Date (Year-Month-Day)

Age of Calves at Vaccination: At Least 5 Months of Age Estimated Average Weight (In Pounds): _____

Date and Time of the Last FWR*:
(*Feed, Safe Water and Rest) _____
Date (Year-Month-Day) Time

Breeding Herd Vaccination

I declare that my breeding herd has been vaccinated for fetal protection according to the vaccination protocol with the following vaccine(s):

Name of Veterinarian: _____
 Name of Vaccine(s): _____
 Date of Vaccination: _____
Date (Year-Month-Day) Number of Cattles in Herd: _____

I authorize « Les Producteurs de bovins du Québec » to collect biological samples from my calves for study and verification purposes.
 I preregistered my calves.

Producer's Signature Veterinarian's Signature (optional)

IMPORTANT The completed form « Vaccination Statement 2024-2025 » and proof of purchase of vaccines administered to calves and breeding herd must be handed over to the auction market before the unloading of calves.

Feeder Calf Vaccination Protocol

Calves must be vaccinated against the following:

- Infectious Bovine Rhinotracheitis Virus (IBR)
- Parainfluenza type 3 Virus (PI3)
- Bovine Respiratory Syncytial Virus (BRSV)
- Bovine Viral Diarrhea Virus (BVD)

According to the following vaccination protocol:

Modified live vaccine (1 dose):

- The vaccine is administered to a calf of at least 5 months of age, and within 2 weeks to 4 months prior to the sale.
- The maximum allowed time between the date of sale and the date of vaccination is 4 months.
- The withdrawal period applicable for the vaccines is 21 days.
- The veterinarian's recommendations must be observed at all times.

IMPORTANT

Only the Modified Live Vaccine is included in the vaccination program.

The modified live vaccine must be administered to calves of at least 5 months of age.

Breeding Herd Vaccination Protocol

Calves must be born from a breeding herd which has been vaccinated for fetal protection. Below, two scenarios for implementing the breeding herd fetal protection vaccination protocol (FP).

Scenario 1

- 1) Calves are vaccinated with a modified live vaccine (MLV) after 5 months of age.
- 2) Heifers are revaccinated with an FP MLV at least 1 month prior to the first breeding.
- 3) Cow herd is vaccinated postpartum with an FP MLV or an inactivated vaccine against the Bovine Viral Diarrhea Virus (BVD) approved for FP and administered according to the label instructions.
- 4) A yearly booster shot is administered according to the label instructions as to achieve FP.

Scenario 2

- 1) Calves are vaccinated with a modified live vaccine (MLV) after 5 months of age.
- 2) Heifers are revaccinated with an FP MLV at least 1 month prior to the first breeding, then revaccinated over the course of the second gestation period (trimester) with an inactivated vaccine against the Bovine Viral Diarrhea Virus (BVD) approved for FP.
- 3) Cows receive an FP MLV at least 1 month prior to the first breeding and are revaccinated over the course of the second gestation period (trimester) with an inactivated vaccine against the Bovine Viral Diarrhea Virus (BVD) approved for FP.
- 4) A yearly booster shot is administered during the second gestation period (trimester) with an inactivated vaccine against the Bovine Viral Diarrhea Virus (BVD) approved for FP.

Following the implementation of one of the vaccination scenarios, new arrivals to the herd with no known vaccination status must receive an FP MLV in the pre-breeding period prior to being integrated into the vaccination protocol.

IMPORTANT

Vaccination of the breeding herd for fetal protection is mandatory for all feeder calves sold at the Quebec Specialized Auctions since August 1, 2023.
